I am committed to fair use of intellectual property, and believe that copyright promotes honesty and integrity. If you wish to use, distribute, reproduce, or otherwise modify any part of this work in any form, contact me to obtain permission first.

Requests for permission to reproduce material from this work should be sent to David G. Whelan at dwhelan@austincollege.edu

Paper copies of this book have, to date, only been made available to Austin College students through Austin College's on-campus Mailing and Printing Services office. Copies dated 2021 were hole-punched and provided to students in three-ring binders. Copies made since 2022 have been bound. Some digital PDF copies have been provided to select Austin College students, and are only intended for use by the Austin College students to which they have been distributed. Any copies produced or shared in a manner contrary to those described here have likely been produced or shared without the permission of the author. Please notify the author if you suspect the authenticity of a copy.

This book was prepared using LaTeX.

Contents

I	Geometric Optics	11
1	The Rectilinear Propagation of Light	13
1.1	A Demonstration of Shadows	13
1.2	Huygens' Principle	14
1.2.1	Wave fronts	14
1.2.2	The Law of Rectilinear Propagation	15
1.2.3	Physical Evidence	16
1.2.4	Light Rays and the Anatomy of a Shadow	16
1.3	Exercises	20
1.4	References	21
2	Reflection and Refraction	23
2.1	A Demonstration of Reflection	23
2.2	Fermat's Principle	24
2.3	The Path of a Reflected Light Ray	24
2.4	A Demonstration of Refraction	25
2.5	The Path of a Refracted Light Ray	26
2.6	Total Internal Reflection	28
2.6.1	Demonstrating Light Traveling from Glass to Air	28
2.6.2	The Critical Angle	28
2.6.3	Example # 1: The Surface of the Water	29
2.6.4	Example # 2: Fiber Optic Cables	30
2.7	Light Traveling in a Medium	30
2.7.1	Actual vs. Apparent Distances	30
2.7.2	The Optical Path Length	32
2.7.3	Apparent Source Distance	33
2.7.4	Background Information: Wavelengths of Light	34
2.8	Prisms and Dispersion	35
2.8.1	Index of Refraction's Dependence on Wavelength	35
2.8.2	The Prism Equation	36
2.8.3	Example # 1: Creating a Rainbow	38
2.9	The Index of Refraction in Air	39
2.9.1	Dependence on Air Density: Positions of Stars	39
2.9.2	Dependence on Air Temperature: Mirages	40

2.9.3	Example # 1: The Desert Mirage	40
2.9.4	Example # 2: The Flying Dutchman	41
2.10	A Remarkable Fact	41
2.11	Exercises	43
2.12	References	45
3	Spherical Mirrors	47
3.1	Demonstrating Reflection from a (Concave) Spherical Surface . .	47
3.2	The Mirror Equation	48
3.3	Magnification	49
3.4	Light Ray Diagrams	51
3.5	Flat Mirrors	52
3.6	Convex Mirrors	53
3.6.1	The Mirror Equation: Sign Conventions	53
3.6.2	Ray Diagrams	54
3.7	Exercises	55
3.8	References	57
4	Spherical Lenses	59
4.1	Refraction at a Curved Surface	59
4.2	Refraction Through Two Curved Surfaces: Lenses	62
4.3	Thin Lenses	63
4.3.1	Light Ray Diagrams for Lenses	63
4.3.2	Some Vocabulary	63
4.4	Exercises	66
4.5	References	68
5	Applications of Geometric Optics	69
5.1	Overview	69
5.2	The Human Eye	69
5.3	Corrective Lenses	72
5.3.1	Correcting for Far-sightedness	72
5.3.2	Correcting for Near-sightedness	72
5.4	Combinations of Lenses	73
5.5	Telescopes	76
5.6	Microscopes	78
5.7	Glass Filters	79
5.8	Optical Aberrations	80
5.8.1	Chromatic Aberration	80
5.8.2	Spherical Aberration	82
5.8.3	Coma	82
5.8.4	Astigmatism	83
5.8.5	Field Curvature	83
5.8.6	Distortion	83
5.9	Exercises	85
5.10	References	86

II Oscillations & Waves 87

6 Simple Harmonic Motion 89

6.1	Demonstrating Simple Harmonic Motion with a Mass on a String	89
6.2	Position as a Function of Time	90
6.3	Deriving Equations for Velocity and Acceleration	90
6.4	Example # 1: Frictionless Mass on a Spring	91
6.4.1	Motion and Frequency of the Mass on a Spring	92
6.4.2	Mechanical Energy of the Mass on a Spring	93
6.5	Example # 2: Vertical Mass on a Spring	94
6.6	Example # 3: Simple Pendulum	94
6.7	Example # 4: Large Amplitude Pendula	96
6.8	Example # 5: Torsional Oscillator	97
6.9	Example # 6: A Physical Pendulum	99
6.10	Exercises	101
6.11	References	102

7 Damped Oscillations 103

7.1	Demonstrating Harmonic Oscillation with Friction	103
7.2	A Single Damping Force	104
7.2.1	Deriving the Equation of Motion	104
7.2.2	Under Damping	106
7.2.3	Critical Damping	107
7.2.4	Over Damping	108
7.2.5	Energy of a (Weakly-)Damped Harmonic Oscillator	108
7.3	Examples # 1 & # 2: Car Shocks and Screen Doors	111
7.4	Example # 3: The Building in the Earthquake	111
7.5	The Quality Factor	112
7.6	Resonance for Cases of Weak Damping	113
7.7	Driving a Damped Oscillator	113
7.7.1	Deriving the Equation of Motion	114
7.7.2	The Amplitude and Phase Shift for Any Frequency	115
7.7.3	Driving at the Resonant Frequency	115
7.8	Example # 4: The Bridge in the Wind	116
7.9	Exercises	117
7.10	References	118

8 Wave Motion 119

8.1	Demonstrating Transverse and Longitudinal Waves	119
8.2	Wave Pulse on a String	120
8.3	The Speed of a Wave Pulse	121
8.3.1	Derivation for the Pulse on a String	121
8.3.2	Speed in a Fluid	123
8.3.3	Speed in an Ideal Gas	124
8.4	The Wave Equation	125
8.4.1	Generally Speaking	125

8.4.2	The Wave Equation for Waves on a String and in Fluids .	126
8.5	Exercises	127
8.6	References	128
9	Harmonic Waves	129
9.1	A Type of Periodic Wave	129
9.2	The Equations of Motion for Harmonic Waves	130
9.3	Harmonic Motion at a Fixed Point	131
9.4	Power of a Wave on a String	132
9.5	Harmonic Sound Waves	134
9.5.1	Displacement of Air Molecules	134
9.5.2	Pressure in the Sound Wave	136
9.5.3	Energy in Sound Waves	137
9.5.4	Intensity of Sound Waves	138
9.5.5	Measuring Sound Intensity	139
9.6	Exercises	141
9.7	References	142
10	Phenomena of Traveling Waves	143
10.1	The Doppler Effect for Sound Waves	143
10.1.1	Deriving an Equation for the Frequency Heard	143
10.1.2	Supersonic Motion and Shock Waves	146
10.2	Traveling Waves and Barriers	147
10.2.1	Demonstrating Traveling Wave Reflection	147
10.2.2	Reflection and Transmission	148
10.2.3	True for All Traveling Waves	149
10.2.4	Diffraction of Traveling Waves	150
10.3	Exercises	151
10.4	References	152
11	The Superposition of Multiple Waves	153
11.1	The Superposition Principle	153
11.2	Harmonic Wave Interference	153
11.2.1	Phase Shift due to Path Length Difference	155
11.3	Beat Frequencies	156
11.4	Standing Waves on a String	156
11.4.1	Wave Functions for Standing Waves on a String	158
11.4.2	Example # 1: Stringed Instruments	158
11.5	Standing Waves in a Pipe	159
11.5.1	Example # 2: Pipe Organ	161
11.5.2	Example # 3: Brass and Woodwind Instruments	162
11.6	The Superposition of Standing Waves	162
11.6.1	Sum of All the Waves	162
11.7	Exercises	165
11.8	References	166

III Wave Optics 167

12 The Wave Equation for Light 169

12.1 Statement of the Problem	169
12.2 A Review of Maxwell's Equations	169
12.3 Relating Space and Time Derivatives	171
12.3.1 With Faraday's Law	171
12.3.2 With Ampère's Law	172
12.3.3 One Equation, in Terms of the Electric Field Only	174
12.3.4 The Speed of Light, Defined	174
12.3.5 Relating the Electric and Magnetic Fields	175
12.4 One Major Assumption	176
12.5 Exercises	178
12.6 References	179

13 Electromagnetic Radiation 181

13.1 The Electromagnetic Spectrum	181
13.2 Electromagnetic Intensity	182
13.3 The Poynting Vector	184
13.4 Radiation Pressure	185
13.4.1 The Momentum-Energy Relation for Electromagnetic Waves	185
13.4.2 Example # 1: The Solar Sail	186
13.5 Polarization of Light	188
13.5.1 Polarization by Transmission	188
13.5.2 Example # 1: Polarizing Sunglasses	189
13.5.3 Example # 2: The Sky	190
13.5.4 Polarization by Reflection	190
13.5.5 Example # 3: Sheet Glass Reflection	191
13.6 Exercises	192
13.7 References	194

14 Diffraction and Interference of Light 195

14.1 The Concept of Diffraction	195
14.2 Interference of Coherent Waves is Caused by Phase Difference . .	196
14.2.1 Phase Difference as a Path Length Difference	196
14.2.2 Phase Difference Due to Reflection	197
14.3 Thin-Film Interference	197
14.3.1 Example # 1: A Thin Film of Water, Between Air and Glass	198
14.3.2 Example # 2: An Oil Film on Water	199
14.3.3 Example # 3: A Thin Film of Air, Between Glass Plates . .	200
14.3.4 Example # 4: A Wedge of Air, Between Glass Plates . .	201
14.3.5 Example # 5: Newton's Rings	201
14.3.6 Example # 6: Soap Bubbles	202
14.3.7 Example # 7: Anti-Reflective (AR) Coatings	203
14.3.8 Example # 8: Interference Filters	203

14.4	The Michelson Interferometer	204
14.5	Two-Slit Interference	205
14.6	Single-Slit Diffraction	206
14.7	Superposition of Slit Interference and Diffraction Patterns	207
14.8	Diffraction Gratings	208
14.8.1	Spectral Resolving Power	209
14.9	Phasors and Phase Difference	210
14.9.1	Drawing the Superposition of Two Waves	210
14.9.2	Finding the Phase Difference	211
14.9.3	Example # 1: Finding the Phase Difference for 2-Slit In- terference	211
14.9.4	Example # 2: Maximum and Minimum Amplitudes for 3-Slit Interference	213
14.10	Interference Pattern Intensity	215
14.10.1	Intensity Derived for 2-Slit Interference	215
14.10.2	Intensity for Single-Slit Diffraction	216
14.10.3	The Superposition of Single- and Two-Slit Intensities . . .	217
14.11	Two Types of Diffraction	218
14.11.1	Fraunhofer Diffraction: Distant Sources of Light	218
14.11.2	Fresnel Diffraction: Near Sources of Light	218
14.11.3	Example Photographs of Fresnel Diffraction	219
14.12	Exercises	220
14.13	References	222
15	Wave-Particle Duality	223
15.1	Light as a Particle: The Photon	223
15.2	Energy Levels in an Atom: Hydrogen	224
15.3	Light-Atom Interactions	226
15.3.1	Elastic Scattering	226
15.3.2	Inelastic Scattering	226
15.3.3	Atomic Emission	226
15.3.4	Compton Scattering	228
15.4	Example # 1: The Photoelectric Effect	229
15.5	Example # 2: The Gas-Phase LASER	230
15.6	Other Types of Lasers	231
15.7	Exercises	233
15.8	References	234
IV	Laboratory Experiments	235
	Laboratory # 1: Shadows	237
	Laboratory # 2: Total Internal Reflection	251
	Laboratory # 3: Mirrors	259

<i>CONTENTS</i>	9
Laboratory # 4: Thin Lenses	269
Laboratory # 5: Optical Resolution	275
Laboratory # 6: The Simple Pendulum	285
Laboratory # 7: Learning Mathematica	295
Laboratory # 8: Physical Pendulum, Damped	297
Laboratory # 9: Driven, Damped Oscillations: Resonance	309
Laboratory # 10: Standing Waves on Strings	319
Laboratory # 11: Air Column Resonance	331
Laboratory # 12: Polarization of Light	341
Laboratory # 13: Interference and Diffraction	351
V Appendices	359
A Statistics	361
A.1 Systematic Errors and Random Uncertainties	361
A.2 Propagating Uncertainties	362
A.2.1 Sums and Differences	362
A.2.2 The General Method	363
A.2.3 Products and Quotients	364
A.2.4 Powers	364
A.3 Least-Squares Fit to a Linear Trend in Data	365
B Complex Notation	367
C References	369
